DETAILED ACTION

This is a response to the amendment field 5/18/2006. Claims 1-3 are under examination.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 1. Claim 1 remains rejected under 35 U.S.C. 102(e) as being anticipated by Martin et al. (US 2003/0016762). Figure 2 of Martin et al. shows a phase shifter circuit (circuit comprises all 202 elements) comprising an input for receiving an input signal (input signal to the first circuit 202 on the left hand side) having a specified oscillation frequency, an output delivering an output signal (output signal at the second or third or fourth 108A) having said specified oscillation frequency and having a variable phase shift with respect to said input signal, at least one control input receiving a control signal (202A) which controls the phase shift of said output signal with respect to said input signal, said control signal originating from a source (210) external to said variable phase-shifting circuit, and a synchronized oscillator (a plurality of circuits 202 circuits form a ring oscillator having output frequency similar to input frequency, thus anticipating the synchronized limitation) having at least a synchronization input coupled said input of said variable phase shifting circuit, at least one output coupled to said output of said output of the variable phase shifting circuit, said synchronized oscillator having a variable free running

Art Unit: 2816

oscillation frequency controlled by said control signal (the oscillation frequency of the ring oscillator is being control by the control signal) as called for in claim 1.

Response to Arguments

- 2. Applicant's arguments filed 5/18/2006 have been fully considered but they are not persuasive. Applicant argues that Martin reference fails to anticipate a "variable phase-shifting circuit" is not persuasive. Martin's figure 2 shows a ring oscillator having a plurality of circuits 202 forms a ring oscillator. The output signal at the second or third or fourth terminal 108A has its shifted phase controlled by the control signal (output of the low pass filter). The phase is shifted with respect to the input signal, i.e., the signal at the first terminal 108A. Since, the phase of the output signal is variably shifted by the control signal, thus, it anticipates the variable phase shifted limitation.
- 3. Applicant argues that "the output signal is not phase-shifted version of a control originating from a source external to said variable phase shifting circuit as required by claim 1" is not persuasive because the applicant misquote the limitations from claim 1. Claim 1 recites "at least one control input receiving a control signal which controls the phase shift of said output signal with respect to said input signal, said control signal originating from a source external to said variable phase-shifting circuit". Such limitation, as note above, are fully anticipated by Martin. Therefore, claim 1 remains rejected.

Applicant argues that Martin's fails to anticipates a "synchronized input" is not persuasive. As noted above, the input synchronizer is seen as the input to the first circuit 202 on the left hand side. The output signal is the signal at either the second or third or fourth terminal

Application/Control Number: 10/603,579 Page 4

Art Unit: 2816

108A. The output signal has the same frequency as the input signal. Therefore, Martin reference fully anticipates limitations of claim 1.

Allowable Subject Matter

4. Claims 2-3 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

5. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tuan T. Lam whose telephone number is 571-272-1744. The examiner can normally be reached on Monday to Friday (7:30 am to 6:00pm).

Art Unit: 2816

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, TIMOTHY P. CALLAHAN can be reached on 571-272-1740. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
